

Sugarplum Fairy Assembly

What you need:

65 lb cardstock in colors that you love.

In the sample I used holographic foil paper for the items that are peach colored. Gorgeous!

Glue. White craft glue works just fine.

Foam dots or tape.

Tiny tweezers - not vital but they make life easier when placing tiny items.

Q-tip for spreading glue.

Cut the elements out either by hand using an xacto or with your craft machine.

Use the colors that you like.

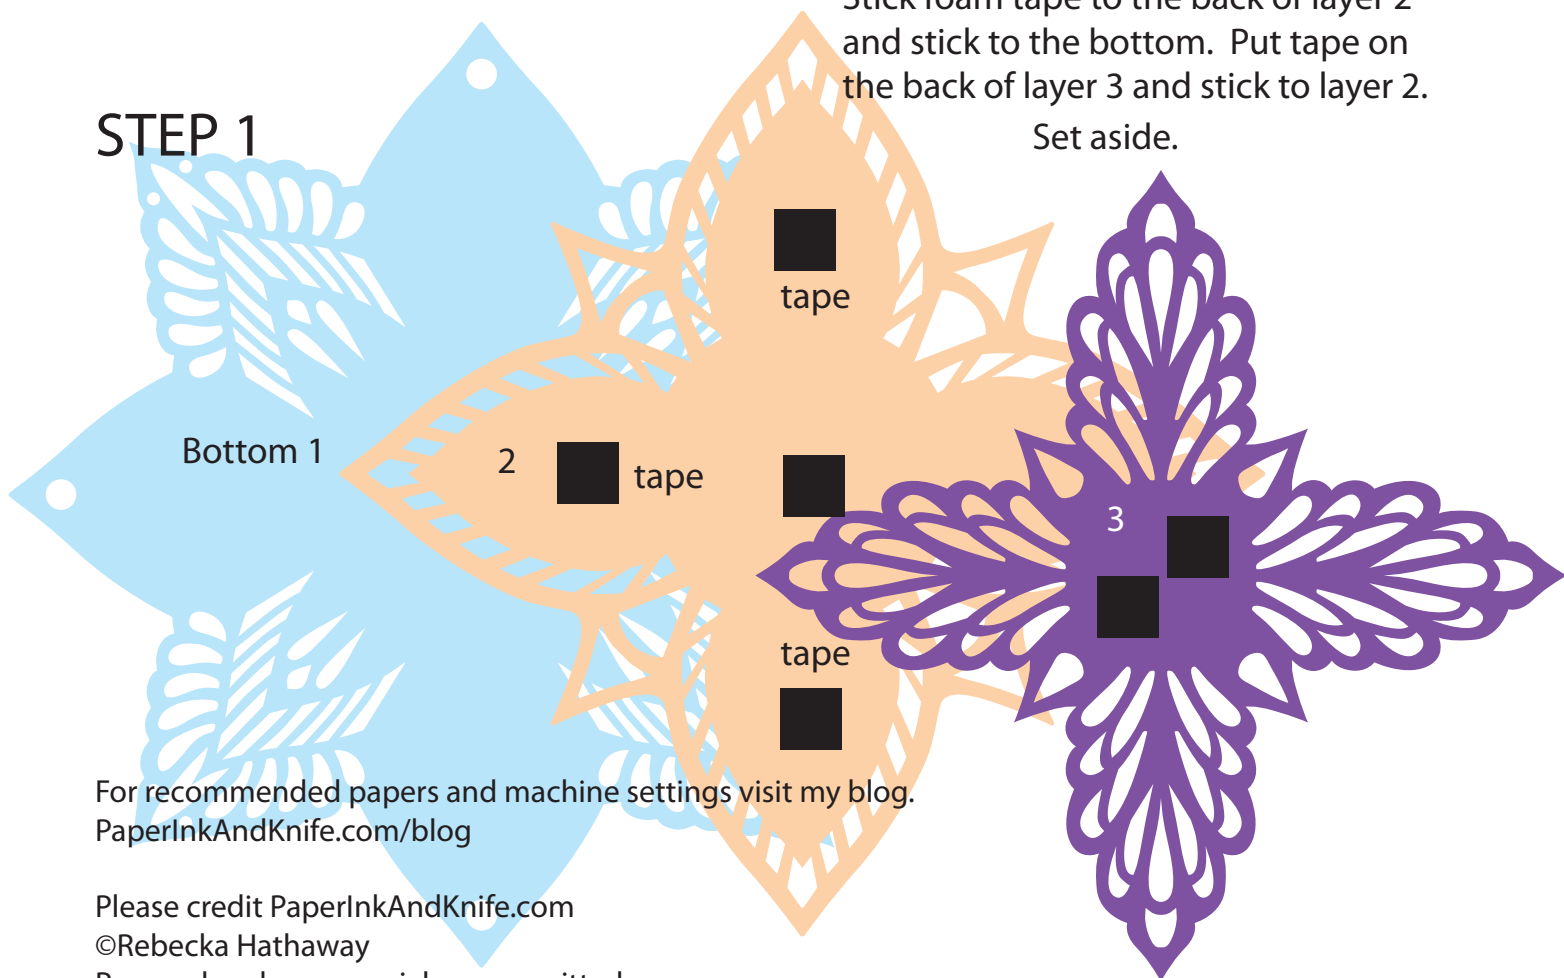

Fairy is sized to be 6 x 6 inches when assembled.

When resizing, be sure to resize everything at the same time.

STEP 1

Stick foam tape to the back of layer 2 and stick to the bottom. Put tape on the back of layer 3 and stick to layer 2.

Set aside.

STEP 2

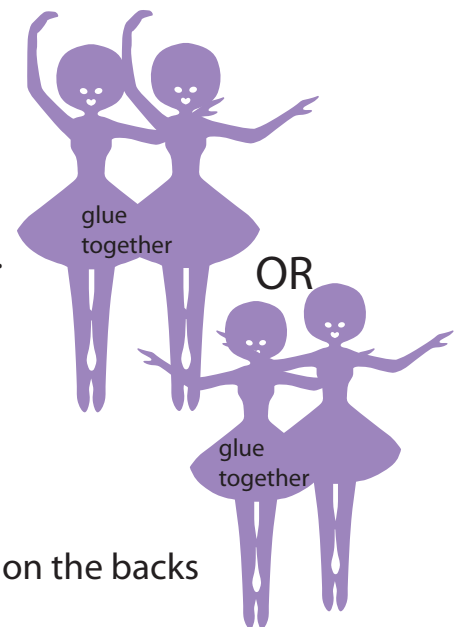

I have included two different body styles with this design.

Choose the one you like.

Cut two of the same style and glue them together.

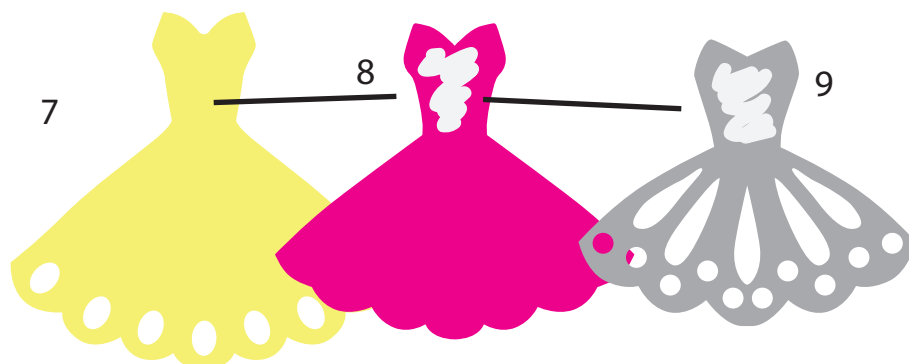

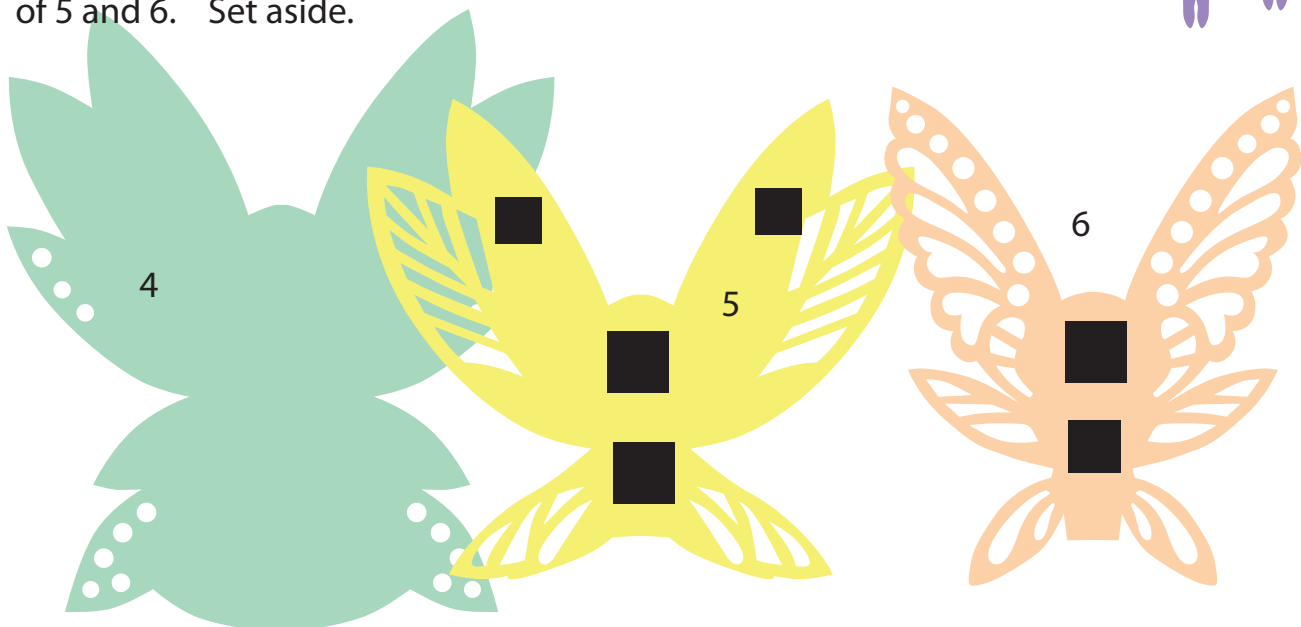

This makes the arms and legs rigid so they hold their shape.

NOTE- you don't have to do 2, but it is recommended.

STEP 3

Stick the wings - layers 4, 5, and 6 together using foam tape on the backs of 5 and 6. Set aside.

Glue just the top of the back of layer 8 and stick to layer 7.

Glue just the top of the back of 9 and stick to the other 2 layers. This allows the skirt to fluff a little bit.

Helpful hint:

I squeeze my glue onto a piece of paper and use a Q-tip to spread the glue on. It prevents me from globbing too much glue onto the tiny pieces.

STEP 4

This is where tweezers are useful.
These pieces are fairy size, so very tiny.

STEP 5

Add foam tape to top of the wings then attach Miss Sugarplum to the taped wings.
Align the top of her head to be just above the middle section.
