

Ferrari Formula 1 car - 60 parts

Instructions

Congratulations with your new model! We hope you will have fun putting it together and paint. It is good to get a older sybling, mum or dad to assist you in the assemble and specially the gluing part.

NOTE. The model is from MDF (Medium Density Fiberboard) material that does not handle water very well unless you have used waterproof paint.

This is what you will need to assemble and paint your model:

- 1) Wood-glue
- 2) Markers, crayons or acrylic paint
- 3) Old newspapers

Now your are ready to start!

- 1) Put newspapers on the table to prevent to stain it with glue or paint.
- 2) Remove the sticker film of the model.
- 3) Remove all parts that will not be used like the frame around the model but DO NOT through them out yet!
- 4) Start by assembling the rig for the tires (marked DM), use that to center the tires when you glue them.
- 5) Assemble the model without applying glue to understand how it will assemble.
- 6) Dis-assemble the model and paint the parts (you can also paint it after is assembled).
- 7) Assemble and glue the parts.
- 8) Make sure the glue and the paint is dry before you start playing with your new model.

Have fun!

TAKK, TAKK.
